

K2 Fitness Maniacs — how to get the shop working

Ten steps, three phases. Larnaca, Cyprus.

The important bit: you can be taking real orders in about a week **without card payments**. Cash-on-delivery and pay-in-shop already work and need no payment provider. Cards come after. That is what keeps this simple.

PHASE 1 Get it live

this week

1 Apply to Viva.com today YOU

They take a few days to approve you. Start it now so the waiting happens in the background while you do everything else.

2 Get his product list and photos HIM

A spreadsheet export from whatever he uses now, and photos of the shelves taken on a phone. This is the biggest job on the list and it is his, not yours.

3 Get the legal text written YOU

Terms of sale, returns policy, privacy policy. The returns policy has to mention the 14-day EU return right. Also needs his company number and VAT number for the footer.

4 Deploy it YOU

Push to GitHub, import into Vercel, point the domain at it. While you are in Vercel: Storage → add Upstash Redis. Then sign up for Resend so order emails actually arrive.

Site is live and taking real orders. Cash on delivery and reserve-in-shop only.

PHASE 2 Turn on card payments

once Viva approves

5 Switch cards on YOU

Paste the live credentials into Vercel. Set the Success **and** Failure URLs to **<https://yourdomain/api/return>** — get these wrong and customers pay, then land on a blank page. Test with a real card, then set **VIVA_ENV** to **production**.

Cards, Apple Pay and Google Pay now work.

PHASE 3 Fix what a live shop needs

the weeks after

6 Real web addresses instead of #/ ME

Google cannot index product pages the way they are now, so nothing ranks.

7 **Make the contact form actually send** ME

Today it says "thanks, we'll reply" and throws the message away.

8 **Fix search for Greek** ME

A Greek search currently returns nothing. Half his customers.

9 **Put stock in a database** ME

Right now two people can buy the last tub and both get charged.

10 **An admin screen for orders** ME

So he can see the day's orders and tick them off as packed.

Steps 6 to 10 are all code. None of them need you or Viva.

What this means for you

Only steps 1, 3, 4 and 5 are yours — and four of those are accounts and paperwork, not work. Step 2 is his. Steps 6 to 10 are mine.

Today: start the Viva application.

Nothing else. It is the only thing on the critical path.

Full technical detail is in `PAYMENTS.md` and `LAUNCH.md` in the project folder.
